Read setup docs

Agent-driven task automation

Configure exactly how and when your agents work.

Custom triggers

Set agents to activate based on task assignments, comments, or workflow events.

Defined behaviors

Configure what the agent does and where it sends data, no coding required.

Workflow integration

Connect agents directly to tools like n8n or webhooks for full process automation.

Flexible use cases

Design assistant

Automate creative production with design-focused agent workflows.

Dev support agent

Generate or review code based on context from assigned tasks.

Marketing agent

Have agents draft and post marketing material across all of your channels.

Sales research agent

Surface qualified leads, analyze buyer intent, and enrich CRM records with contextual insights.

Built-in Project Manager

Dart AI

Dart AI is our built-in project management agent that comes with every workspace. It supports tasks from creation and progress tracking to managing deadlines and team communication.

Always On

No setup required. Dart AI works out of the box to keep your projects moving.

Default agents

Dart supports integrating with any 3rd party agent.

**Cursor**

Coding

**Magic Patterns**

Design

**Predis**

Marketing

**Clay**

Sales research

You can also set up a custom AI agent.

Setup Checklist

- 1 Go to Settings > Agents
- 2 Click 'Add Agent'

Easy setup and management

- Quick configuration**
Set up agents from the settings menu in just a few steps.
- No-code options**
Use templates or visual tools to build agents without writing code.

AI Agents³

Choose Default or Custom

Scalable by design

Create multiple agents tailored to different projects or teams.

Define Triggers & Actions

Loved by teams

"I've been using Dart for months now, and it is my #1 tool for managing my projects! Plus, the user experience is crisp and it's a pleasure to make, track, and then close out tasks."

John Morgan
Head of Engineering

"I really enjoy using the app - it has replaced my other kanban apps because of the AI features. Auto fill properties and generate subtasks are a massive boon."

Sijia Qiu
Analytics Consultant

Frequently Asked Questions
